*Applied Bio Cyber Sciences  
in BioThreat Protection, Monitoring,  
& Emergency Response*

17.November, 2009

**Holiday Seasons, especially with the “Second Wave” of a potentially mutated H1N1 flu (spreading like wildfire in Europe and even Canada)**

**Means:**

**More Work, more Overload, more “Murphy’s Law”, more Crime and Suicides, more Rush-Demands on overtaxed providers and careworkers – and – more need for Help from Experts who can help in critical, fast and economical ways.**

**We can help you Today in small or big ways to make your workload and success easier.**

From short one-hour, get-the-team-together sessions to longer, more formalized seminars, tutorials, workgroups, to planning the Resilience and Sustainability Measures You All Want for Your Community, to actually providing physical Services.

Whether you are social workers, health workers, police, fire, EMT, school administrators and teachers, factory and office operators, shopping mall and superstore managers, or elected/appointed officials – we are all in the same boat. We are offering right now to be working With You to develop better tools and methods and responses. Much is about process, method, information, communication, and also in the serious medical and technical areas of detection, diagnostics, confirmation, and response.

Yes, we are top experts, and we can provide these to your agency, department, team - economically and creatively. We are not paying overhead for costly executives or investors.

Our team and our references and credentials include some of the very same people you see interviewed on the TV News, but mostly they are docs and scientists like us who are busy trying to solve the problems of Today. We are offering what we can do for You, because we want you to be the people getting the thanks and appreciation later from your constituents, employees, students, and those in your care.

**You need our assistance, not because of something lacking in your organization, but because the Problems we face Together are more complex, more demanding, more threatening, more unpredictable than those which any of us have faced before.**

Sincerely,

Martin Dudziak, PhD  
Chief Scientist
