29.November.2009

To the Reader:

This is a list of URLs that provide further information, beyond my CV, professional bio, references, supportive resume-type material, and other documents that are at <http://tetradyn.com/professormd>

Naturally, that is a good place to start. There is material about myself, my work, my credentials, my skills, my experience, my abilities for you, today. However, you as a person, manager, recruiter or department-chair/head, have your special needs and requirements. You have special ideas about where I can be put to good use part-time or longer, on a temporary basis or longer. Our dialogue, by phone and in person, can open up brilliant solutions for your organization and your goals. I am hopeful that any assistant or “gatekeeper” reading this will have the forward-thinking insight to bring this and related material to your attention.

Please note that I require compensation, for work performed, to include at least part of the real earnings (as cash or check) that I can use in order to pay necessary living expenses. I cannot work only on any basis of commission, equity, bonus, etc., because I need actual income, not “future” income, promises or probabilities.

<http://tetradyn.com> describes comprehensively my work which has resulted in a very good, strong, ready, capable, well-managed, staffed company, founded by myself, now with a management team, and including substantive market-ready products and services. However, up until the present (Nov., 2009) we have yet not been able to get firm signed contracts with any deposits, pre-payments, nor investments, nor loans, nor grants. While there are many things in the active and real “hopper”, there appears to be no money forthcoming to me for some months ahead. I cannot survive personally until that happens.

Most of the above is related to the life sciences and medicine, but also applicable to the physical sciences, to computing and information technology, and to applications into public safety, security, defense and counterterrorism. Persons or companies who will hire me Today, Now, can be assured of having fruitful and productive opportunities for discussion with TETRADYN management for future gainful business.

<http://chips.tetradyn.net> offers access to several general-readership documents and an information service designed to help the public to better understand matters of public health and infectious diseases, especially, but other aspects of my lifework.

<http://cubit.tetradyn.com> includes some limited introductory views into the products and services connected with the core technologies and products that I have designed and produced for TETRADYN, namely, CUBIT (a comprehensive medical and public health technology model and family of products and services) including CRAIDO (Community Rapid Response for Infectious Disease Outbreaks; both mobile and stationary labs for diagnostics, informatics, and therapeutic response).

<http://podlab.tetradyn.com> is more specific about the “EcOasis” PodLab for mainly environmental (EHS) and emergency (disaster relief) applications.

<http://nomadeyes.com> is more specific about the NomadEyes architecture, software and product line pertaining to situation awareness, notification and response, including for non-emergency consumer applications.

M J Dudziak, List of Relevant Professional/employment URLs with source materials and documents

<http://tetradyn.com/work-offers> includes some of the same CV/bio material plus a document about what I can do and am willing to do, for earning, for income, that is purely physical, manual, low-grade, and not using my educational or scientific background at all. My personal ego is not so strong that I will work only with my professional and managerial skills.

<http://instinnovstudy.org> is about the Institute for Innovative Study, conceived and designed, but as yet unfunded, to be comparable – not competitive, but synergistic and symbiotic – with the Institute for Advanced Study in Princeton, NJ.

<http://library.tetradyn.com> offers a selection of previously published or presented papers, mostly of a scientific or technical nature. There is significant diversity here. I can work on any of these topics well.

<http://tetrdyn.com/pallas-related> includes some papers, project documents and proposals that pertain mainly to social and human-serving applications, both using the internet and otherwise, aimed at reduction of violence, crime, rape, and other forms of domestic and community abuse.

<http://tetradyn.com/astric> is particularly related to the ASTRIC project and design for space-based defensive and constructive measures relating to near-earth-objects (NEO) such as small asteroids. While of limited interest perhaps to most people and institutions, this also demonstrates diversity in capability.

<http://tetradyn.com/thera> is a brief introduction to a technology for hybrid-hydrogen engines and vehicles' it was well-received early-on by the X Prize Foundation for one of their competitions, but we could not raise the small capital necessary to complete work on the prototype vehicle.

Sincerely,

Dr. Martin Dudziak

PS

I am able to work from a present base with high-speed broadband internet and a full complement of computing and communication tools and skills, as well “on site” anywhere in the USA or in the world. No country is “off-limits” and I am particularly adept at cultural adaptation and “fitting in”. As indicated in my CV, I have significant foreign language and security clearance capabilities. I am also able to work well in “field” environments that can require operating and living under below-average conditions compared to what is typically found in G8 nations.
